## OPEN SOURCE PROJECTS

---

### Open Source Tools and Data for Music Source Separation

2020 - Present

*Lead Developer*

An online, interactive book providing a practical approach to training deep learning models for music source separation. Complete with explanations of key concepts, animations, and interactive, runnable code, this gives users the conceptual and practical tools for making their own source separation systems. October 2020 stats: **10k visitors** (8k unique). Reached **#2 on Hacker News** on October 11th 2020! View tutorial at <https://source-separation.github.io/tutorial/>

## **DDSP: Differentiable Digital Signal Processing**

2020 - Present

*Contributing Developer*

DDSP is a library of differentiable signal processing functions (synthesizers, reverbs, filters, etc) that enables them to be used with deep learning systems for audio generation or analysis.

## **Slakh**

2019 - Present

*Lead Developer*

Slakh2100 is an open dataset of 2,100 audio files and mixtures, synthesized from MIDI data using professional-grade virtual instruments. The first release contains an order of magnitude more data (in terms of hours of mixture data) than comparable datasets for source separation, and contains time-aligned transcription data for many more instruments than previously released datasets. Code to generate virtually unlimited amounts of data also available.

## **nussl**

2015 - Present

*Lead Developer*

nussl is a flexible, object oriented Python audio source separation library that contains implementations of many classic and state-of-the-art source separation algorithms and models. Users can train their own models with the included hooks for common datasets, or download pretrained models from our zoo.
